HOW TO

KEURIG COFFEE MAKER

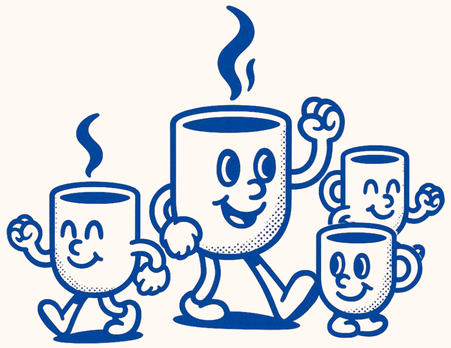
⚠ Important ⚠ The coffee machine sits on a sliding tray. Please slide the tray halfway out before opening the machine to insert a K-Cup pod. If you don't pull the tray out, the Keurig lid may slam into the glass cabinet above and shatter. Thank you for being careful!

1. Press the power button (top right of the screen).

2. If the water reservoir (on the side/back) is low, remove it, fill it with fresh water, and reattach it securely.

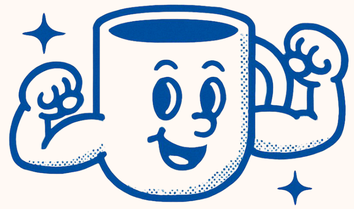
3. Slide the tray halfway out. Lift the handle to open the pod holder. Place one K-Cup pod inside (do not remove the foil lid). Close the lid firmly by pushing the handle down.

4. Make sure your mug is on the drip tray under the coffee spout.



5. Choose your brew size by pressing the cup icon buttons (6 oz or 8 oz). The larger the number, the milder the coffee.

6. Select your preferred strength of coffee. For example, press the "Strong" button if you prefer a bolder cup of coffee.



7. Press the brew button to start. Brewing takes about a minute.

8. Once finished, lift the handle, remove the used pod, and throw it away, please. Enjoy!
